

## Errata - Lichen Epiphyte Scenarios

Despite extensive cross-checking, the collation of large-scale automated datasets for this analysis resulted in a small number of published errors. These are outlined below. Please contact Chris Ellis with any additional errors: [c.ellis@rbge.org.uk](mailto:c.ellis@rbge.org.uk)

1. Problems have been noted in detecting grid squares for southern and midland England, especially in the 100km cell 'TL'; note however, that the toolkit should be applied with extreme caution in southern/midland England and Wales.
2. *Caloplaca crenularia* is misnamed for the epiphytic *Caloplaca ferruginea*. Data downloads of Recorder v. 6 previously misapplied this name. This error is now believed to have been fixed. The distributional data and modelling is correct for *C. ferruginea*.
3. *Opegrapha prosodea* is out of alphabetical order in the species lists, and appears nested within *Ochrolechia*.
